

Fire Risk Report

Hazard Identification and Evaluation

- Each facility has different process chemistry, equipment, and inherent risks
- Identify the major fire scenarios specific to the facility.
- Identify potential performance issues with each pillar.
- Evaluate the probable consequences of the fire scenarios.

Five Pillars of Fire Protection

- Each pillar should be evaluated independently.
- The combined pillars make up the Fire Protection Concept.
- Construction and layout and "fireproofing" can be interchanged depending upon the facility
